CROSSBOX™
CBX20

HIGH DEFINITION SPORTS TRACKING DEVICE

YOUR MOTOCROSS RIDING COACH

In-depth moto analytics are the key to fast improvement of your riding skills. Meet the CBX20, the most accurate sports tracking device specifically designed to analyze riding performance of motocross athletes. Packing the latest technology by Ublox®, CBX20 logs your lap and section times, riding paths, braking and acceleration points, your heart rate and more.

Record your laps on every outdoor track worldwide and analyze the results within the Crossbox smartphone app.

CBX20 is compatible with Apple iOS and Android devices. Learn more about all supported smartphones and heart rate sensors at: www.crossboxapp.com

01 ABSOLUTE PRECISION

CBX20 is the most accurate sports tracking device available. Positions are measured by GPS, Glonass, Galileo and Beidou satellites, at 20 times per second with an accuracy of 0.05 seconds. You won't find a training device that is superior, guaranteed.

RECOMMENDED

HELMET MOUNT

Crossbox uses an ultra-strong velcro technology to mount the CBX20 on the top of any helmet. The helmet is the optimal position, which allows a clear view to the sky for best performance. Additionally, the body safes the device's sensitive sensors from hard vibrations and impacts.

BIKE MOUNT

Some race series outlaw the modification of the helmet, which includes devices like Crossbox. Use the Crossbox bike-mount velcro on your bike to fix the device on the front fender at race events.

Be aware that the high vibrations of the bike and the hard impacts reduce the life-time of your product. Some features, like the jump analytics, only work if mounted on the helmet. The 1 year-warranty will not cover damages caused by bike mounts.

02

CORE FEATURES

LAPS AND SECTION TIMES

Analyzing your laps has never been easier. Place your own start & section gates within the app and view all your times with an accuracy of 0.05 seconds!

LAP X

The Lap X is the sum of all your best sections in one session. Find out which lap time would be possible if you had a perfect lap!

02

CORE FEATURES

ACCELERATION / BRAKING

6D motion sensors record your acceleration and braking activities 100 times per second. Start working on smooth acceleration and master the art of braking at every corner you ride and witness your lap times drop from session to session!

HEART RATE

Combining your heart rate with your lap times is crucial for finding out which technique is the most efficient way to ride! CBX20 is compatible with all major bluetooth heart rate chest straps (like Garmin HRM Dual, watches are not compatible).

Please note: CBX20 doesn't include a heart rate chest strap.

02

CORE FEATURES

JUMP DISTANCE

With Crossbox, you will find the fastest jump combinations. Not only is this information fundamental for professional Supercross but also for every Motocross track with different jumping options!

RACE STARTS

Crossbox detects every start scenario you do on the track and visualizes times to 5m, 10m, 20m, 40m. Work on your start technique and have instant verification if it just feels faster or it really is!

02

CORE FEATURES

TRACK LEADERBOARDS

Crossbox is the #1 platform for social racing. Every track, no matter if created by you or others, has a leaderboard generated by the best lap times of every track user. Crossbox lets you select and overlay any lap of other track users with yours. View a lap playback and see where others are beating you!

LAP COMPARISON

You completed a personal new best lap but have no clue why it was faster? Crossbox lets you overlay any two laps, even your Lap X or laps from friends, and play a real time lap playback to determine where you win or lose time on the track.
